trending
AI Topic & Tools

Problems :-

Artificial Intelligence (AI) is rapidly growing field with new trends and tools emerging continuously.

Being updated with the latest developments in AI is a challenging task for professionals and organisations particularly those places where AI is playing its crucial role.

Solution :-

By analysing all the issues, we found a solution that is an AI application which focuses on trending AI applications, topics and tools which can become a valuable source for people. So we are developing an application in which things which are related to AI will be shown. For eg. news, trending

topics and tools which are related to AI. One small AI Chat bot will also be available for clearing queries of the users.

Sources and Technology used in creating the application :-

- i] Frontend → HTML, CSS, JavaScript, Google's TensorFlow, Brain-It
- ii] Backend → Firebase, PHP / Django
- iii] Chatbot → Python, ChatterBot
- iv] Version Control → Git, GitHub
- v] Database → MySQL, MongoDB, PostgreSQL.
